7450 Extertible Routing System (XRS)
- Supports medium to high-end service deployment; designed for high density, 270/270, and the next of VCs
- Gigabit Ethernet connectivity from 10GE to 40GE (and plus)
- 7700 Series Core/Access/Aggregation/Service Devices
- Supports full suite of carrier-grade features including MPLS, L2/L3 VPN, and L3VPN

7700 Service Router (SR)
- A family of high-performance L3 core routers for the next-generation Network
- Enables efficient and secure delivery of IP services, voice, data, and mobile
- Supports a range of network functions including MPLS, L2/L3, and L3VPN
- Provides unified management and control of the entire service architecture
- Supports an extensive suite of value-added services including L2/L3, L3VPN, and L3VPN

7705 Service Aggregation Router (SAR)
- A high-performance, high-density L3 core router for the next-generation Network
- Provides a scalable range of network functions including MPLS, L2/L3, and L3VPN
- Supports an extensive suite of value-added services including L2/L3, L3VPN, and L3VPN
- Provides unified management and control of the entire service architecture
- Supports an extensive suite of value-added services including L2/L3, L3VPN, and L3VPN

7105 Service Access Switch (SAS)
- A high-performance L3 core router for the next-generation Network
- Provides a scalable range of network functions including MPLS, L2/L3, and L3VPN
- Supports an extensive suite of value-added services including L2/L3, L3VPN, and L3VPN
- Provides unified management and control of the entire service architecture
- Supports an extensive suite of value-added services including L2/L3, L3VPN, and L3VPN

Virtualized Service Router (VSR)
- Highly scalable and flexible functionality enhanced with cloud-based design and platform for effortless network transformation
- Enables high-performance, cloud-based service delivery with virtualized, on-demand service deployment
- Supports a range of cloud-based services including virtualized, cloud-based service delivery
- Supports a range of cloud-based services including virtualized, cloud-based service delivery
- Supports a range of cloud-based services including virtualized, cloud-based service delivery
- Supports a range of cloud-based services including virtualized, cloud-based service delivery

Service Router Operating System (SR OS)
- Custom software defined networking (SDN) service router operating system
- Supports a range of cloud-based services including virtualized, cloud-based service delivery
- Supports a range of cloud-based services including virtualized, cloud-based service delivery
- Supports a range of cloud-based services including virtualized, cloud-based service delivery
- Supports a range of cloud-based services including virtualized, cloud-based service delivery

FP3 400 Gb/s Silicon
- The world's first high-performance x86-based silicon processor
- Provides a scalable range of network functions including MPLS, L2/L3, and L3VPN
- Supports a scalable range of network functions including MPLS, L2/L3, and L3VPN
- Provides a scalable range of network functions including MPLS, L2/L3, and L3VPN
- Provides a scalable range of network functions including MPLS, L2/L3, and L3VPN

5620 Service Aware Manager (SAM)
- The world's first high-performance x86-based silicon processor
- Provides a scalable range of network functions including MPLS, L2/L3, and L3VPN
- Supports a scalable range of network functions including MPLS, L2/L3, and L3VPN
- Provides a scalable range of network functions including MPLS, L2/L3, and L3VPN
- Provides a scalable range of network functions including MPLS, L2/L3, and L3VPN

Network Services Platform (NSP)
- The world's first high-performance x86-based silicon processor
- Provides a scalable range of network functions including MPLS, L2/L3, and L3VPN
- Supports a scalable range of network functions including MPLS, L2/L3, and L3VPN
- Provides a scalable range of network functions including MPLS, L2/L3, and L3VPN
- Provides a scalable range of network functions including MPLS, L2/L3, and L3VPN

Service Portfolio
- Provides a scalable range of network functions including MPLS, L2/L3, and L3VPN
- Supports a scalable range of network functions including MPLS, L2/L3, and L3VPN
- Provides a scalable range of network functions including MPLS, L2/L3, and L3VPN
- Supports a scalable range of network functions including MPLS, L2/L3, and L3VPN
- Provides a scalable range of network functions including MPLS, L2/L3, and L3VPN

7450 Ethernet Service Switch (ESS)
- Highly scalable and flexible functionality enhanced with cloud-based design and platform for effortless network transformation
- Enables high-performance, cloud-based service delivery with virtualized, on-demand service deployment
- Supports a range of cloud-based services including virtualized, cloud-based service delivery
- Supports a range of cloud-based services including virtualized, cloud-based service delivery
- Supports a range of cloud-based services including virtualized, cloud-based service delivery

7450-02-125
- Supports a scalable range of network functions including MPLS, L2/L3, and L3VPN
- Supports a scalable range of network functions including MPLS, L2/L3, and L3VPN
- Provides a scalable range of network functions including MPLS, L2/L3, and L3VPN
- Provides a scalable range of network functions including MPLS, L2/L3, and L3VPN
- Provides a scalable range of network functions including MPLS, L2/L3, and L3VPN
