Course Outline

Riverbed HCB300 Hyper Converged Branch Implementation Solutions

Riverbed HCB300 Hyper Converged Branch Implementation Solutions

Hyper Converged Branch Implementation Solutions is a four-day class, to include hands-on practice as a lab-intensive combined course offering, delivered by Riverbed technical experts. The overall course objectives are to inform the learner about new SteelFusion hardware and software feature advances, proper setup, configuration, and monitoring tasks, as well as typical recovery solutions.

TARGET AUDIENCE

This course is specifically designed for Riverbed employees, customers, and resellers/partners involved in the administration of application servers and the deployment of Riverbed SteelFusion products in enterprise environments. For students who will perform more basic operational support and reporting, we recommend the "HCB200 Hyper Converged Branch Essentials" course.

TYPE

Online Training
